Dear Sir:-

I have done my assessment work on all my claims. Discovered gold in several place. High Grade ore was found in 1940. Assays run up #45-0 to #2900 and up. Comes only in small pockets if careful, and watch your ore as work is done on the lode, to make it a success. It takes money to mine, so I work it on a shoe string. e. e. t.

I am doing very well so far, even I have to work it alone without any help.

Hope to make a success of it in time.

As I alone know where the rich ore is to be found, + taken out. It takes hard work + determination to stick with the job, to make good. Plenty of low grade ore, but I hold that for milling some time in the future.

Sincerely yours

(Hi-Grade) Frank Olenizak
