PROPERTY NAME: Sample Site 1327

OTHER NAMES: \_\_\_\_\_

MINERAL COMMODITY(IES): Au, Cu, PotashTYPE OF DEPOSIT: BrecciaACCESSIBILITY: See map, roads fairOWNERSHIP: UnknownPRODUCTION: NoneHISTORY: NoneDEVELOPMENT: NoneACTIVITY AT TIME OF EXAMINATION: None

GEOLOGY: Site is series of shallow prospect pits and shafts, fairly recent, in silicified and argillically altered volcanics and volcanic breccia. Rocks are abundantly stained with Fe-Mn oxides, and secondary copper stain fractures. Rocks cut with quartz veins and veinlets. Workings appear to be associated with north trending east dipping fault zone.
