PROPERTY NAME: Silver State Mine

OTHER NAMES: _____

MINERAL COMMODITY(IES): Gold/SilverTYPE OF DEPOSIT: Quartz VeinsACCESSIBILITY: Good road from the north or south down
the valley but difficult to go to west.OWNERSHIP: Gold Producers Inc, Cain Springs, Nev.PRODUCTION: UnknownHISTORY: UnknownCounty: HumboldtMining District: AwakeningAMS Sheet: Mc DermittQuad Sheet: Silver State Draw 7 1/2Sec. 9 T 38N R 36ECoordinate (UTM): see belowNorth 1 1 1 1 1 1 mEast 1 1 1 1 1 1 mZone +11DEVELOPMENT: One large adit at the eastside of the camp and a major shaft and
adit to the west or up the hill...no road to the upper workings other
minor prospects.ACTIVITY AT TIME OF EXAMINATION: None

GEOLOGY: Large quartz veins in a deeply weathered granodiorite. A 2-3 foot
white bull quartz vein was explored by the big adit in the central
portion of the camp. The vein bears N65°E 35°NW and has been mined
along its strike for over 200 feet. A small prospect about a 1/4 mile
farther to the NE may be on an extension of the same vein. Smaller
quartz veins parallel and cross-cut the major vein system. Sample
2379 was taken from the dump and the prospects associated with this vein.
Mineralization included; Pyrite, chalcopyrite, and possible Tetrahedrite
gold and silver.

Sample 2380 was taken from the dump and exposed vein in the upper
workings to the west. The upper shaft was sunk on a 2-3 foot quartz
vein that bear N20°W 85°E. The shaft is about 60 feet deep and
is intercepted at depth by an adit driven along the strike of the vein
from a position about 60 feet down the canyon. The vein is high in
pyrite but not much else is visible.
