

0530 0015

(215) Item 18

PROPERTY NAME: Monarch Star Mine
OTHER NAMES: Monarch Group or Copper Blue Mine
MINERAL COMMODITY(IES): Copper and Turquoise
TYPE OF DEPOSIT: Veins
ACCESSIBILITY: Poor roads east from the road to Belmont
OWNERSHIP: Recently staked by U.S. Minerals Exploration
Arnada, Colo.
PRODUCTION: Unknown
HISTORY: Unknown

County: Nye
Mining District: Belmont
AMS Sheet: Tonopah
Quad Sheet: Belmont West 7½'
Sec. 22, T 8N, R 45E
Coordinate (UTM):
North 4 2 6 4 3 4 5 m
East 0 5 0 9 0 0 0 m
Zone _____

DEVELOPMENT: Shaft and adits

ACTIVITY AT TIME OF EXAMINATION: Recently staked

GEOLOGY: The shaft is on a highly silicified shear zone within shaley host rocks of Paleozoic age. The shaft is part of a series of workings along a N 40°W trending shear that is strongly argillitized and iron-stained. Sample 2041 was taken from the dumps and assayed high in Mn, Cr, Ni with lessor values for Cu, Pb, Zn and Co.
