(215) Item 23

PROPERTY NAME: Sample Site 2078

OTHER NAMES: \_\_\_\_\_

MINERAL COMMODITY(IES): Ag, Pb, Sb, Cu, Sb, V, Zn

TYPE OF DEPOSIT: Quartz vein

ACCESSIBILITY: Less than a mile NW of Belmont

OWNERSHIP: Unknown

PRODUCTION: Unknown

HISTORY: Unknown

County: Nye

Mining District: Belmont

AMS Sheet: Tonopah

Quad Sheet: Belmont West 7½'

Sec. 23, T 9N, R 45E

Coordinate (UTM):

Zone	_____

DEVELOPMENT: A series of inclines along a quartz vein.

ACTIVITY AT TIME OF EXAMINATION: None

GEOLOGY: A brecciated quartz vein system is exposed for a quarter of a mile along its strike length by 7 fairly shallow inclines and a equal number of prospects. The N40°W, 45NE vein is hosted along a bedding plane in a dark-gray limestone that has the same general inclination as the vein. Sample 2078 was selected from the brecciated vein and from the dumps. Assays values were generally for same suite of elements as those found in the shafts to the NW but with lower concentrations; Ag, Cu, Pb, Zn, Sb and V.
