

0530 0035

(213) Item 22

PROPERTY NAME: War Eagle Group

County: Nye

OTHER NAMES:

Mining District: Barcelona Belmont

MINERAL COMMODITY(IES): Ag, Au, Pb, Cu.

AMS Sheet: Tonopah

TYPE OF DEPOSIT: Quartz veins

Quad Sheet: Jefferson 7 1/2'

ACCESSIBILITY: Three miles west of Meadow Canyon

Sec. 32, T 8N, R 45E

OWNERSHIP: Unknown

Coordinate (UTM):

PRODUCTION: Unknown but thought to be small

North 4 27 87 50 m

HISTORY: Sometime before 1945.

East 0 50 50 95 m

Zone

DEVELOPMENT: Workings were reported to be a 500 foot crosscutting adit and several shallow shafts. The 75 foot adit and one of the shafts are 3700 feet to the east of the main adit.

ACTIVITY AT TIME OF EXAMINATION: None

GEOLOGY: The area of the caved main adit is in paleozoic sediments mainly phyllite and a sequence of alternating limestones, siltstones and shales of Ordovician age. The main crosscutting adit is very near a thrust contact with rocks of the Carrara Formation. Sample 2032 was taken from the dumps near the adit with only minor galena shows. Assays from the sample were very low. The mine reported veins to 10-12 feet wide with \$10/ton values chiefly from gold.
