PROPERTY NAME: ~~Black Horse Mine~~ Molly Claims
 OTHER NAMES: ~~Molly Claims~~ Black Horse Mine
 MINERAL COMMODITY(IES): W
 TYPE OF DEPOSIT: Skarn
 ACCESSIBILITY: Along good, but narrow dirt roads, not shown on map
 OWNERSHIP: _____
 PRODUCTION: Small
 HISTORY: _____

(89)
Item 12

County: Esmeralda
 Mining District: Black Horse
 AMS Sheet: Walker Lake
 Quad Sheet: Miller Mountain 7.5
 Sec. 14, T 2N, R 34E
 Coordinate (UTM):
 North 4 2 0 9 2 2 0 m
 East 0 3 9 7 3 5 0 m
 Zone +11

DEVELOPMENT: _____

ACTIVITY AT TIME OF EXAMINATION: None

GEOLOGY: Sample taken from a N85E trending adit following bands of garnet and epidote in silicified limestone. Outcroppings consist of crystalline epidote banded in medium grey limestone. Area is thinly bedded, silicious and calcarous, dipping steeply northward (possibly part of an E-W trending anticline). Several miles of new roads, but no other evidence of recent workings. Probably worked in the 1940's or 1950s. Rocks highly fractured and chloritized. Crystalline garnet and epidote occurs in bands, pods, and stringers. Rocks were lamped, but no tungsten or moly minerals apparent. At sample site, adit only about 50 feet. Minor prospect pits and trenching in general area.

REMARKS: Sample Site 1074
