DEVELOPMENT: Small trench on contact between volcanic units.

ACTIVITY AT TIME OF EXAMINATION: Staking in 1985, but no other activity

GEOLOGY: A hand-dug trench exposes the contact between volcanic units which has some light green chalcedonic quartz without visible mineralization and without significant assay values. Gold for sample 3884 was .04 ppm. Another prospect further up the hill to the north consisted of a 20 foot adit that followed the glassy vitrophere of a cooling unit. Sample 3883 taken from inside the adit was also without significant mineralization.
