ARCHITECTURAL DESCRIPTION: One-story, three bay, rectangular plan commercial structure. ALTERED/MISSING FEATURES:

The front facade has been greatly altered, incompatible materials and design, intrusive signs. REAR ELEVATION:
Greatly altered with new construction.

Historically two separate one-story frame structures occupied this location. Early records indicate that Eugene Chaumond's Restaurant occupied the south portion (no. 10), while the north portion was a Saddlery and Harness Shop owned by J. Smith.

By the turn of the century, no. 12 (north portion) was demolished and no. 10 was vacant. It appears that by ca. 1915 the north portion was rebuilt and connected onto no. 10. From that time through the 1930's it served as the Virginia Garage.

ARCHITECTURAL DESCRIPTION: Two-story, three bay, brick, gable roof behind stepped brick false front, rectangular plan commercial building. INTACT FEATURES: Storefront right two bays are recessed doorways, left bay split horizontally to provide access to basement and window; faded signs painted on brickwork; all openings have metal fire shutters at first and second stories; at top is hexagonal wood flag pole with top ball. ALTERED/MISSING FEATURES: Porch appears to be of later construction and is of a single design. REAR ELEVATION: Intact but deteriorated, three deck porch is altered.

Historically this building has served as a saloon for the majority of its lifetime. Earliest sources indicated that F. Hertlein operated a retail liquor shop here and that Mrs. E. Richott had her dressmaking shop upstairs. Although the name Union Brewery may have been associated with the building since its construction, the first (over)

<p>The Empire State Mill, owned by Charles Coover and L. Dunn in 1863, was situated at the foot of Sugarloaf Peak in Six-Mile Canyon. The mill was water and steam-powered with a water wheel 40 feet in diameter. A 15 hp. engine furnished the power for 10 stamps with a 12 ton capacity per day. The stamps were increased to 15 by 1866 and the capacity of 15 tons per day. The mill was reported idle in 1871-72, but ran on ore from the Chollar-Potosi Mine in 1873, the Ophir Mine in 1875 and the Chollar ore in 1877. The mill was still in operation in 1887 when it was running 5 stamps on water power. Rubble walls mark this site.</p>

The Oest Mining Company sunk a 300 foot shaft and recorded a production from 1887 to 1892. The vein worked is on the Comet fault, branching off the Haywood-Oest fault, and within the meta-volcanic. It was described as a wide mineralized zone from 40 to 150 feet wide containing small lenses of high-grade gold ore. In 1921, the mine was reopened and then leased again to another company in 1925. The Dayton Mining and Milling Company purchased the claim in 1943.

A black and white photograph of a two-story wooden building, identified by a large sign above the entrance as the "PONDEROSA SALOON". The building features a decorative cornice with a repeating pattern of small, dark, pointed ornaments. The second floor has six tall, narrow windows. The ground floor has a wide entrance with a small porch supported by posts. To the left of the main entrance, there are smaller windows and what appears to be a side entrance. The building is set on a street, and a dark, possibly paved area is visible in the foreground. The overall style is that of an early 20th-century photograph.

<p>The Bullion Mine, situated on the "Divide" between the Chollar-Potosi and Gold Hill Bonanza, was incorporated in 1863. Exploration of the claim during the 1860's failed to turn up a profitable ore body. By 1869, it was believed that no ore at all existed on the claim. The Gold Hill News of August 29, 1869 announced that, "the Bullion Shaft was 1400 feet deep, and dry, with no ore and no indication of ore". In 1880, exploration was carried out by diamond drill boring. By 1885, all work on the lower levels had been suspended. Estimates of more than one million dollars was expended on the claim between the years 1863-69 without producing one ton of ore.</p>

The Kossuth Mine claim lies along the Silver City branch of the Comstock Lode and originally covered 2700 feet. Although staked in 1859, the claim was not actively worked until 1873, when a compartment shaft was started. The hoisting works was equipped with two 35 hp. steam engines and an eight inch pump having a 9 to 7 foot viable stroke and a capacity of 12,000 gallons of water per hour, together with a 75 hp. steam engine were installed to unwater the mine. The mine properties were purchased by the Dayton Mining Company in December, 1926.

The Ward claim was located in 1860, south of and adjoining the claim held by the Julia Mining Co. and to the east of the Imperial claim. Th holdings were increased by 400 feet upon the completion of a transaction with the Julia Mining Co. in 1876. As a result of failure to find ore, operation was suspended in 1881. Work was resumed in 1889 but was again suspended due to lack of ore in 1895.

The Birdsell Mill was constructed as a 20-stamp quartz mill by Fred Birdsell and C. Carpenter in 1865. Located on the side of the hill west of town and south of the Main Street of Dayton, it lies adjacent to the Rose Ditch constructed by the Chinese in 1856. In 1866, an addition was built increasing the capacity of the mill by 10 stamps. After running nearly four years on Comstock ore, the Birdsell Mill was altered to a tailings plant, one of the first in the state, and worked the large quantity of tailings accumulated back of town. In 1881, a narrow gauge railroad was constructed in order to haul the tailings from the reservoir to the mill. The mill was sold to Joseph M. Douglass, a prominent stock broker of Virginia City, in 1882. Operations of the Douglass properties continued for a number of years but by the 1890s it had become idle and fell into disrepair. In 1896, the plant was reconstructed into a cyanide plant, but soon failed due to an inefficient recovery system.

the new facility. The 33-mile conducting line from the Floriston Plant to the Virginia City plant consisted of double 6 wire circuit of No. 4 hand drawn copper wire, 1/4 inch in diameter, on glass insulators and 35-ft. redwood poles. The substation was equipped with six 220-Kilowatt transformers, 24,000 to 2,300 volts reduced with requisite switches and lightening arresters. The distribution circuit was of weather proof copper wire carried to each of the mining works equipped with electric machinery. The economical advantage of electrical power over steam power, along with the higher rate of efficiency, was of unquestionable benefit to the

DESCRIPTION (CONTINUED)

This depot was destroyed in the fire of October 1875 and another structure measuring 32' x 138' with a 31 ft. platform was completed in 1877. The cost of the building was \$3332 with an additional \$491 worth of furnishings. The depot was later equipped with a coal and lumber yard and a sawmill. The wooden platform was rebuilt in 1902 and the roof was resingled after it was partially destroyed by a blizzard in 1903. Further alterations occurred in 1925 when the track was shortened by 14 ft. at its north end and a 9' x 16' incline (angled ramp) was constructed at the northwest corner. The depot operated until 1938 after which it was used variously as a stable

lumberyard and storage house. The platform has since been removed but the depot itself has not been substantially altered.

The Julia claim was located in 1860 and lies adjacent to the east boundary of the Potosi and Bullion claims. Due to the failure to find profitable ore, work was suspended in the mine until 1871 when a 3 compartment shaft was sunk. In June of that year, work was again suspended due to flooding. Improved hoisting and pumping engines were installed in October, 1874. A construction inventory lists a 200 hp. hoisting engine with a 22 inch cylinder, 36 inch stroke and 8 inch main shaft. A new 180 hp. pumping engine with a 14 foot flywheel, 11 foot driving wheel and a 2½ foot pinion was also listed. Pump rods were manufactured from red spruce brought from Dutch Flat, California. With these improvements the mine was unwatered and the underground exploration resumed. The mine failed to produce profitable ore and was finally shut down in 1891.

In order to tap the "Big Bonanza" an ambitious 'third line' of vertical shafts were started all along the Comstock Lode, all of which were sunk to a depth of 3000 feet. These shafts ran from north to south beginning with the C&C in the north end southward to the east Yellow Jacket shaft. The Obiston was started by the Gould & Curry Mining Company in order to link up with this major drive to explore and extract the riches of the "Big Bonanza".

The Daney claim was located in 1859 on the south end of the Silver City branch of the Comstock Lode near the old Dayton-Carson City road. The small ore bodies discovered in the claim appear to have been cleared out by the late 1880s. Consequently, mining was suspended in 1890.

MATERIALS, EXTANT EQUIPMENT, AND IMPORTANT BUILDERS, ENGINEERS, ETC.

The repair shops consisted of machine and plate shops. These were placed on either side of a bay at the end of the coarse crushing unit. The bay between the shops was 32x50 feet. The machine shop, situated to the left of the bay, was 50x30 feet and 32 feet to the eaves in height. It contained two lathes, three pipe and bolt machines, two emery wheels, a hydraulic press, and a large planer. The plate shop, at the opposite end of the bay, was equipped with punching and shearing machines, a steam hammer, forges, a gib crane, and small tools. The side walls of both machine shop and plate shop were constructed of reinforced concrete. A 30 inch gauge track (mine gauge) extended through the supply yard, machine shop, and plate shop. It was connected to the mine track system.

HISTORICAL DESCRIPTION: The new Sutro Mill was erected about 1900 at a distance of 600 feet from the mouth of the Sutro Tunnel, just below ;the dump. The mill was water-powered and equipped with ten stamps, recuding sixty tons of ore per day. The machinery for the mill was manufactured by the Risdon Iron Work, San Francisco. The Mill crushed ore from the Con. Virginia Mine in 1911. The mill was destroyed by fire within the last decade. Stone foundations and one 5-stamp battery remain.

A black and white photograph of a modern, two-story building. The building features a prominent balcony on the upper floor with a railing. The ground floor has large glass windows and doors, and is supported by several vertical columns. The building is surrounded by other structures and trees, suggesting an urban or suburban setting.

This is a detailed street map of a residential area in New York City. The map shows a grid of streets and numbered lots. The streets include Stewart St, Howard St, A St, B St, C St, D St, E St, F St, Hagen St, Flowerly St, and various numbered lots. A specific lot is circled in red. The map also includes a scale bar (0, 200, 800 feet) and a north arrow.

Streets shown:
