

1300 0011

(25) Item 11

PROPERTY NAME: Sample Site 1329

OTHER NAMES:

MINERAL COMMODITY(IES): Au, Ag

TYPE OF DEPOSIT: Vein

ACCESSIBILITY: See map, road very rough

OWNERSHIP: Unknown

PRODUCTION: Small

HISTORY: Unknown

County: Clark

Mining District: Crescent

AMS Sheet: Kingman

Quad Sheet: Crescent Peak 15'

Sec. 26, T 28S, R 61E

Coordinate (UTM):

North 3 9 2 7 9 0 0 m

East 0 6 6 9 7 7 5 m

Zone +11

DEVELOPMENT: Vertical shaft, with many small prospects and adits, old trailer

ACTIVITY AT TIME OF EXAMINATION: None

GEOLOGY: Workings follow a N-S, vertical dipping shear zone. Site is contact between granodiorite intruding the PG granite ^{augen} gneiss. Sulfide bearing quartz veins cut the host rocks. Argillic alteration coats exposed surfaces. Clots of pyrite, galena, and chalcopyrite occur in the massive white quartz vein and in the gneiss; pyrite is also finely disseminated in the gneiss, however, none was found in the intrusive. Malachite coats the surfaces along with abundant Fe-Mn staining. Gneiss banded with fine to coarse texture.

REMARKS: Sample Site 1329
