Specify terms in either case. \$10000.00 Cash, balance in four equal
payments semi-annually.
If you have any other information to give on your property use the space
below.

This product is used extensively as a filter for refining sugar and oil. As a metal polish it has no equal. It is a perfect nonconductor and may be used for steam pipe covering, or in ice boxes and refrigerators. As a paint mixture it is wonderful, and will cut the price of paint 50 per cent and make a more durable paint than pure lead, and while it is pure white it will not change the shade of any colored paint you mix it with. There is quite a demand for it in brick form as well as in pulverized form, (it is soft and easily sawed into bricks). There are many other uses to which it may be put, one of which is furnace lining. A chemist in Los Angeles claims he can make a furnace lining, the basis of which is our product, that will withstand a temperature of 7000 degrees Fahrenheit. Any further information will be cheerfully given upon inquiry.
