PROPERTY NAME: Copper King #1OTHER NAMES: Not knownMINERAL COMMODITY(IES): Cu, Ag?, Au?TYPE OF DEPOSIT: Contact metaACCESSIBILITY: See topo sheetOWNERSHIP: 1981 -E. Chapel & D. StultzPRODUCTION: None.

HISTORY:

County: WashoeMining District: DeepholeAMS Sheet: LovelockQuad Sheet: Squaw Valley 7½'

No. Corner

Sec. 16, 17, T 34N, R 22E

Coordinate (UTM):

North 4 5 2 3 7 1 5 mEast 0 2 8 8 9 2 0 mZone 11

DEVELOPMENT: May have been a short adit(?) If so, it's caved. Currently there's only a "cat road" up the side of the mountain. Pendant @ end of road has been opened up.

ACTIVITY AT TIME OF EXAMINATION: None & hasn't been for some time.

GEOLOGY: Small - 50' x 200 +' schistose hornfels enclosed in granodiorite (small pendant). Copper oxides are fairly abundant & occur along fractures in both the granodiorite & hornfels. Minor altered along contact between hornfels & granodiorite - mainly bleaching. Opened cut above "road cut" shows plentiful copper oxides.

Most of mineralization appears to be in granodiorite along contact & most of it seems to be along the north contact zone. Also white Fe-stained quartz vein material lying around surface. Didn't see any in place.

(2) Prospect to north in sec. 8. Same as these - contact meta. Small adit, trends N60°E may be 100 + feet long. Heavily Fe-stained hornfels & quartz lying on dump. Sample #2408. Property staked in April 1981 by above people. Nash Claims of Gianella and Mountain View tungsten prospect of Bonham.

REMARKS: Property restaked in March 1981 by above named owners. Picture #8 on camera

Looking NE @ north side of contact between hornfel & granodiorite cut @ top of picture shows fair amount of copper oxides.

Sample #2407.
