

1490 0012

PROPERTY NAME:

Sutherland Divide Mine

OTHER NAMES:

MINERAL COMMODITY(IES): Ag-Au

TYPE OF DEPOSIT: Silver - bearing epithermal lodes.

ACCESSIBILITY:

OWNERSHIP:

PRODUCTION:

HISTORY:

Esmeralda

Item 12

Mining District: Divide

AMS Sheet: Tonopah

Quad Sheet: Tonopah 7 1/2'

NE/4 NE/4

Sec. 22, T 2N, R 42E

Coordinate (UTM):

North 4207750m

East 0478750m

Zone

DEVELOPMENT: Several shallow shafts.

ACTIVITY AT TIME OF EXAMINATION: None

GEOLOGY: Silver mineralization, anomalous Mo, and silicification occur along a N55 - 65E, 55 SE fault in Fraction Tuff (Bonham and Garside 1979, p. 127). The style of mineralization is similar to the other silver-bearing lodes of the Divide District.

REMARKS: The mine and fault zone are shown on plate 1 of Bonham and Garside (1979).
