Cinnabar occurs irregularly in or adjacent to small seams and fractures in the andesites but at no place noted in sufficient quantity to constitute even low grade ore. Cinnabar seems to be associated with calcite and chalcedony in seams and also occurs as small specks in the altered andesite.

Mine Workings A shaft inclined at 45 degrees sunk 165 feet. Various trenches and test pits on eight unpatented claims. Property examined March 19, 1942.
