

1740 0004

PROPERTY NAME: Sample Site 2756  
OTHER NAMES: NW of the Ellendale Mine  
MINERAL COMMODITY(IES): Au/Ag, pyrite, Cu and sulfides  
TYPE OF DEPOSIT: Veins  
ACCESSIBILITY: Fair road from McKinney Tanks  
OWNERSHIP: Unknown  
PRODUCTION: Unknown  
HISTORY: Unknown

(225) Item 4  
County: Nye  
Mining District: Ellendale  
AMS Sheet: Tonopah  
Quad Sheet: Yellow Cone 7½'  
Sec. \_\_\_\_\_, T 3N, R 46E  
Coordinate (UTM):  
North 4 217 050m  
East 0 520 118 0m  
Zone \_\_\_\_\_

DEVELOPMENT: Old untimbered incline

ACTIVITY AT TIME OF EXAMINATION: None

GEOLOGY: Vein bearing N70°W, dipping 60-70N was explored by a 50 foot incline that follows the dip slope. The fault controlled vein is approximately 4 feet thick at the surface and is contained by an altered and silicified rhyolite in the footwall and by what appears to be andesite in the hanging wall. Quartz within the vein forms stringers. Mineralization includes visible pyrite, minor copper, and sulfides. The shear is strongly bleached and stained by manganese. The area has been drilled within the last five years.
