

NAME OF PROPERTY

1770 0001

172

Item 1

Lincoln 3
Blue Eagle and Quail Patented Lode Claims

Jacob A. Hyman - owner
3401 Clay Street
San Francisco, California

LOCATION

Springs
Ely Mining District, Lincoln County, Nevada, about 6 miles from Pioche.

GEOLOGY

A gold, silver, and lead bearing flat dipping quartz vein which follows the bedding planes of shale. The area covered by the two claims is dissected by numerous minor faults which cut off and displace the vein in many places. Both the vein and its mineralization lack continuity.

DEVELOPMENT

Development work consists of three adit tunnels and several open cuts totaling about 700 linear feet of workings. Two main adit tunnels have been driven into a ridge from opposite sides. One of these adit tunnels, about 300 feet in length, appears to follow a fault in limestone and shale, but does not cut the vein. The other adit tunnel is about 225 feet long, from which some raising and crosscutting has been done. A small amount of ore has been mined from near the portal of this tunnel. Past production is not known, but it evidently was very small.

Ore reserves negligible.
