

1790 0013

PROPERTY NAME: Sullivan Mine
OTHER NAMES: _____
MINERAL COMMODITY(IES): Au, Ag, Ba, Bi, Cu, Pb, Sb, V
TYPE OF DEPOSIT: Vein
ACCESSIBILITY: About 1 mile east of Pole Line Road
OWNERSHIP: Nevada Company (1951)
PRODUCTION: Reported to be small
HISTORY: The early 1900's and the 1930's

County: Nye
Mining District: Fairplay
AMS Sheet: Tonopah
Quad Sheet: Tonopah
Sec. 29-32, T 11N, R 36E
Coordinate (UTM):
North 4292750 m
East 0417750 m
Zone _____

DEVELOPMENT: A sixty-foot incline and considerable prospects along with unreported placer activity.

ACTIVITY AT TIME OF EXAMINATION: Drilling in the vicinity by FMC.

GEOLOGY: The workings are along quartz veins that trend to the NW varying in thickness and in places appear to be pods. The host rocks are silicified volcanics. Sample 2090 was chipped from exposed veins along a prospect in the central portion of the camp. Visible mineralization included copper oxides and sulfides in a matrix of quartz breccia. Assay values were Cu 2000ppm, Pb 5000ppm, Sb 3000ppm, V 700ppm, Bi 700ppm, Ba 1000ppm, Ag 700ppm, B 200ppm and Au 50ppm. The west flowing drainages from the main camp had been, in part placer mined.
