

1800 0028

PROPERTY NAME: Nevada Fairview Mine  
OTHER NAMES: Bluff Mine  
MINERAL COMMODITY(IES): Silver/gold  
TYPE OF DEPOSIT: Epithermal vein  
ACCESSIBILITY: Fair road up Snyder Canyon off Bell Canyon  
which was formerly called Crown Canyon  
OWNERSHIP: Tenneco Minerals  
PRODUCTION: Small  
HISTORY: Discovered in 1906 and worked as part of  
Nevada Fairview Mine until 1910..Bluff name came  
from one of the original claim names.

County: Churchill <sup>⑦</sup> Hem 35  
Mining District: Fairview  
AMS Sheet: Reno  
Quad Sheet: Bell Canyon 7-1/2'  
Sec. 7, T 15N, R 34E

Coordinate (UTM):  
North 4 3 3 6 6 0 0 m  
East 0 3 9 6 5 3 0 m  
Zone +11

DEVELOPMENT: A single caved adit on the south side of Snyder Canyon

ACTIVITY AT TIME OF EXAMINATION: None

GEOLOGY: Adit is on the west side of a huge, silicified and partly brecciated andesite (dacite?) near the contact with a volcanic intrusive. The silicified structure crops out and fills the canyon on both sides, standing 20-30 feet high and 20-30 feet in thickness; it can be traced on the surface for about three hundred feet along its strike length. Sample 3810 was selected from the dump and consisted of breccia with pyrite and other sulfides.
