PROPERTY NAME: Sample Site 3829

MINERAL COMMODITY(IES): Silver/gold
TYPE OF DEPOSIT: Quartz vein
ACCESSIBILITY: In the impact area

OWNER: Unknown
PRODUCTION: Unknown
HISTORY: Looks to date from era of exploration in the early 1900's.

DEVELOPMENT: Small prospect-pit about 6-8 feet deep.

ACTIVITY AT TIME OF EXAMINATION: None

GEOLOGY: The area is dominately rhyolite but the prospect is near a contact with andesite intrusive. The exposed vein consists of vuggy quartz with dark-gray sulfides that strikes E-W and dips 10° NW. Sample 3829 was chipped from the vein and assayed 100 ppm molybdenum but little else.
