

1800 0033
PROPERTY NAME: Sample Site 3835
OTHER NAMES:
MINERAL COMMODITY(IES): Copper, lead, zinc, silver
TYPE OF DEPOSIT: Contact
ACCESSIBILITY: No roads in the area west of Nevada
Hills Mine
OWNERSHIP: Unknown
PRODUCTION: Unknown
HISTORY: Much earlier but exact date not known

County: Churchill Dem 40
Mining District: Fairview
AMS Sheet: Reno
Quad Sheet: Bell Canyon 7-1/2'
Sec. 18, T 16N, R 34E
Coordinate (UTM):
North 4 3 4 4 7 0 0 m
East 0 3 9 6 6 8 0 m
Zone +11

DEVELOPMENT: A large shaft, maybe 150 feet deep.

ACTIVITY AT TIME OF EXAMINATION: None

GEOLOGY: The first 15 feet of the shaft passes through nearly horizontal, limey-shales. Rock on top of the mine dump representing the last material taken from the shaft is a fine-grained granite, but it does not crop out in the vicinity of th workings. Sample 3835 was selected from the dump and consisted of manganese-oxide stained garnet, epidote and quartz with base metal sulfides and oxides. Assays were anomalous in copper, lead, zinc, molybdenum and strontium. Silver was 50 ppm and gold was .05 ppm.
