

1800 0041
PROPERTY NAME: Nevada Hills Extension Shaft
OTHER NAMES: Sample Site 3844
MINERAL COMMODITY(IES): Silver/gold, lead
TYPE OF DEPOSIT: Epithermal vein

ACCESSIBILITY: South of the main workings

OWNERSHIP: Patented ground

PRODUCTION: Unknown

HISTORY:

County: Churchill Hem 48

Mining District: Fairview

AMS Sheet: Reno

Quad Sheet: Bell Canyon 7-1/2'

Sec. 20, T 16N, R 34E

Coordinate (UTM):

North 4 3 4 3 9 6 0 m

East 0 3 9 8 8 8 0 m

Zone +11

DEVELOPMENT: Shaft that extended the ground worked to the south

ACTIVITY AT TIME OF EXAMINATION: None

GEOLOGY: This particular workings was sunk in what appears to be a barren andesite or dacite. Much of the dump material was a highly argillitized, white volcanic with minor quartz-volcanic-breccia and only limited mineralization. The assay showed only low silver-lead-zinc values. Silver was 7 ppm and gold was less than .05 ppm.
