LOCATION

Washoe Mining District, Washoe County, Nevada, about 9 miles west of Virginia City.

GEOLOGY

Several intersecting fissure veins in monzonite and andesite. High-grade gold and silver bearing lenses are occasionally found within the vein structure. Such material is of negligible quantity.

DEVELOPMENT

Practically all the development work on this property has been done in developing the Maffi vein, which work consists of three long adit tunnels, raising between the levels, and some winzing.

No ore reserves.
