PROPERTY NAME: Silver Hill Claims

OTHER NAMES: \_\_\_\_\_

MINERAL COMMODITY(IES): Cu, Ag?TYPE OF DEPOSIT: Mineralized shear zone

ACCESSIBILITY: \_\_\_\_\_

OWNERSHIP: Herb Horton, Golconda, NVPRODUCTION: None.

HISTORY: \_\_\_\_\_

County: Humboldt Item 19Mining District: Golconda?AMS Sheet: WinnemuccaQuad Sheet: Golconda 7 1/2'  
near cSec. 26, T 35N, R 40E

Coordinate (UTM):

North 4 5 2 5 2 0 0 mEast 0 4 6 2 7 0 0 mZone +11

DEVELOPMENT: Prospect pits and one open cut up to 7m deep. Also a small heap leach pad with a 1m thick pile of ore. Pad is 8 x 10m, and was probably constructed within the last 2 years.

ACTIVITY AT TIME OF EXAMINATION: None.

GEOLOGY: Oxide copper minerals and limonite gossan occur along fractures in a N10W, ~90° shear zone in light gray phyllite. The zone is 2-4m wide, and the rock appears to be silicified within the zone. No sulfide minerals were noted. A prospect 0.5 km to the north is probably similar, although it was not visited.

REMARKS: Sample 499 is a grab sample from the face at the north end of the open cut. Rock from this cut was placed on the heap leach pad, but apparently never leached. Photo LG841-12 is of the heap leach pad.
