

2120 0035

PROPERTY NAME: Apex No. 1 Claim  
OTHER NAMES: \_\_\_\_\_  
MINERAL COMMODITY(IES): Au?  
TYPE OF DEPOSIT: Mineralized Fault  
ACCESSIBILITY: \_\_\_\_\_  
OWNERSHIP: \_\_\_\_\_  
PRODUCTION: \_\_\_\_\_  
HISTORY: \_\_\_\_\_

County: Humboldt 120  
Mining District: Gold Run  
AMS Sheet: Winnemucca  
Quad Sheet: Winnemucca 15'  
NW/4 NW/4 SW/4  
Sec. 17, T 34N, R 40E  
Coordinate (UTM):  
North 4 5 1 8 8 0 0 m  
East 0 4 5 7 1 0 0 m  
Zone 11

DEVELOPMENT: Several shafts and adits, all probably less than 25m deep.

ACTIVITY AT TIME OF EXAMINATION: None. Recently staked claims belong to Exxon.

GEOLOGY: Several minor prospects apparently explore north-trending faults or shear zones in olive phyllite of the Preble Formation(Cambrian). An inclined shaft explores a due N, 40°E fault, while a vertical shaft explores a N10W, 75E zone. Very little quartz vein matter is present on the dumps and little can be seen along the shear zones. White quartz vein matter usually contains limonite boxworks; pyrite was observed in one sample. The shear zones are 10-30cm wide.

REMARKS: Sample 2303 is of selected vein quartz and gossan from the dump of the inclined shaft.
