

2130 0008
PROPERTY NAME: Goldbanks Merger Gold Mine

OTHER NAMES: _____

MINERAL COMMODITY(IES): Au, Ag

TYPE OF DEPOSIT: Vein

ACCESSIBILITY: Good

OWNERSHIP: Red Hill Mining Co. (purchased from John Kasteler, Lovelock, NV)

PRODUCTION: _____

HISTORY: _____

County: Pershing ⁽²⁷³⁾ July 8

Mining District: Goldbanks

AMS Sheet: Winnemucca

Quad Sheet: Mt. Tobin 15'

SW/SW, S 16 and W/2, NW/4,
Sec. 21, T 30N, R 39E

Coordinate (UTM):

North 4 4 7 9 5 7 5 m

East 0 4 4 8 8 4 0 m

Zone 11

DEVELOPMENT: Numerous bulldozer cuts; short adits and shallow shafts.

ACTIVITY AT TIME OF EXAMINATION: None. However, a sign reports that 1984 assessment work has been done.

GEOLOGY: At one adit examined a north-trending, 45°W vein approximately 1m wide cuts silicified rhyolite? the vein material on the dump is fine-grained, white to pinkish, chalcedonic quartz. The wallrocks are commonly strongly silicified and pyritized, and small feldspar phenocrysts are converted to kaolinite(?).

REMARKS: A sample (no. 2905) was collected of chalcedonic vein matter from a dump of an adit, and of pyritized and silicified rhyolite from a bulldozer cut nearby.
