DEVELOPMENT: Several shallow shafts (less than 10m) and short adits.

ACTIVITY AT TIME OF EXAMINATION: None.

GEOLOGY: The workings in S14 are all in tuffaceous sandstone, pebbly tuffaceous sandstone, epiclastic tuff, etc. of the Siebert Fm. There is no obvious reason for these workings. The area is in post-mineralization rocks, there is no hydrothermal alteration in the area, and no structural features were noted. The prospects shown in SE/4 SE/4 S/4 are now covered by the re-aligned highway U.S. 95. They were in an non-altered area also.
