DEVELOPMENT: Several inclined shafts, adits, remains of old equipment

ACTIVITY AT TIME OF EXAMINATION: The site has recently been staked

GEOLOGY: Workings in Pennsylvanian-Mississippian Birds Spring Formation, along north-south trending\* fault zone. Inclined shafts follow bedding planes of dark grey limestone, which is overlain by a limonitic stained shale layer. Shale is cut and fractures are coated with crystalline calcite, sericite covers the fracture planes. The rocks are almost phyllitic. The shafts are surrounded by shallow exploration pits. The beds strike north-south and dip west. The shale layer closely resembles the Pilot Shale.
