2240 0016

a. Groom district, Lincoln County, Nevada (Groom mine).

b. Geographic coordinates: 37°20'N, 115°46'W.

c. Status of exploitation: Shut down in 1956; had been in fairly continuous modest production of lead and silver since 1915, though with gaps of as much as 3 years of no production. Reserves are limited by the size of the block of faulted ground permissive for mineralization.

e. Adequacy of our present knowledge: Adequate

g. Major mineralogic and geologic features: Replacement bodies in Cambrian limestone along bedding and irregularly along fissures. Andesite dikes and flows, some rhyolite flows, age and relations to ore deposits not known. Galena relatively low in silver, subordinate jack and pyrite, minor chalcopyrite, possibly tetrahedrite; sparse quartz, calcite.
Silver in the United States

(Data sheets for individual mining districts, prepared in conjunction with metallogenic map for 1960 International Geological Congress.)

Authorship:

E. T. McKnight - All districts west of the Mississippi River, except
most of those silver-producing districts containing
less than 1,000 tons of lead or zinc in the follow-
ing states: Arizona, New Mexico, Nevada, Oregon and
Washington. Also the following silver districts in 4
of the states mentioned: Vulture and Helvetia, Ariz.; Ash Peak,
Apache, Black Range, Chloride Flat, Georgetown and
Lake Valley, New Mexico; Ashwood and Granite, oregon;
White Pine district, Michigan.

A. V. Heyl, Jr. - All districts east of the Mississippi River (except White Pine, Mich.)

Harry Klemic and W. L. Newman - Silver districts not associated with
lead or zinc, in Arizona, New Mexico,
Nevada, Oregon, and Washington (except as listed above).
