GEOLOGY: Brecciated structure, 4-5 feet thick, strikes N30W to NS, dips 65-75 degrees NW, vein crops out on ridge west of sample site 3016-17, generally follows bedding in quartzite, sample chipped from 6"-8" thick quartz vein within structure containing tetrhedrite, galena, manganese oxides, some green and blue copper oxides. Structure cuts N70-75E striking quartz veins, possibly veins which project from inclined shaft to east, and N50E striking vein which crops out on the west slope of the ridge. A thin shale unit within the quartzite lies between the outcrop on the ridge and the prospects to the southwest.

REMARKS: Vein was found while climbing ridge west of the inclined shaft.
