

2260 0012

PROPERTY NAME: Quarry Area  
 OTHER NAMES: Sample Sites 3080 and 2081  
 MINERAL COMMODITY(IES): Au  
 TYPE OF DEPOSIT: Silicified Volcanics and Sediments  
 ACCESSIBILITY: Good road south of Highway #6  
 OWNERSHIP: Nassau Limited 2304 Oberlin St.  
Palo Alto Calif 94306 Jan 16, 1986  
 PRODUCTION: Only building stone thus far.  
 HISTORY: Unknown

County: Nye  
 Mining District: Hannapah  
 AMS Sheet: Tonopah  
 Quad Sheet: McKinney Tanks 7 1/2  
 Sec.       , T 2N, R 45E  
 Coordinate (UTM):  
 North 4 2 1 1 0 8 0 m  
 East 0 5 1 0 0 0 0 m  
 Zone       

DEVELOPMENT: Large quarry site on the westside of range, numerous new roads and drilling pads as well as drill holes. Drilling done in 1985.

ACTIVITY AT TIME OF EXAMINATION: New staking in Jan, 1986

GEOLOGY: The quarry is in an area of colorfully stained dimension stone used for flagging, although very little activity has occurred for a many years. The general area (several square miles) has been subjected to intensive hydrothermal activity including silication. Gold values assoicated with portions of the section has led to intensive road building and drilling done mostly in 1985 by Cominco Americam. Its my understanding that they have since dropped their option on the property, which may account for the recent staking by Nassau in the general area? Sample 3080 is from favorable looking silicified zones exposed by recent dozer work, although no visable mineralization was observed. Sample 3081 was from the quarry area and was selected from iron-stained silicified seams and veinlets.
