Item 16

NAME OF PROPERTY

Stormy Day Mine (Thatcher, Woodburn and Turpin)

Thatcher, Woodburn and Turpin - lessors

A. Avellano, J. J. Thrasher and Helen C. Thrasher - owners

LOCATION

Hooker Mining District, Pershing County, Nevada, 16 miles south of Gerlach, Nevada.

GEOLOGY

Contact metamorphic deposit between limestone and granite. Ore occurs as lenses of undetermined length replacing limestone along metamorphosed zone in contact with granite. Economic mineral scheelite.

DESCRIPTION

Property consists of 10 lode claims. Principal workings comprise numerous open cuts, short cross-cuts, 240 foot cross-cut tunnel, and 189 foot drift.

PRESENT AND POTENTIAL ORE RESERVES

Work at this property was discontinued in September 1943. At that time it was thought that possibly not to exceed 5,000 tons of ore averaging about .6% WO₃ was available (this proved to be a generous estimate). Since operations of lessees ceased, advices have been received that the owners shipped approximately 1,000 tons of ore averaging around .5% WO₃ - although we have no substantiating evidence of this.
