	A STATE OF THE STA
DEVELOPMENT: Open pit with possibly caved adit and shaft 🏹 20 meter west.	
ACTIVITY AT TIME OF EXAMINATION: None. Near Noranda Tonic claims	and the second s
Prospect consists of Au open pit approximately 10 meters deep at	west end
GEOLOGY: gradually sloping to surface level, approximately 15 meter to the east,	
N-S (See reverse)	and / meter
Looking east into pit the top meter appears to be a cap of Jasperoidal m	aterial*.
Below the silty mudstone(?) is cut with stringers and pods of purple mic	rocrystalline
fluorite (?). Surface highly kaolinized. Leveling of surface but in in	significant
amounts. At west end of pod dark gray.	
Addit covered fluorite claims to the north.
