

LOCATION

In Marietta-Hunton Mining District, Mineral County, Nevada, about 6 miles southwest of Marietta.

GEOLOGY

Scattered bodies of tactite along a contact between granite and hornfels. Schoolite occurs disseminated in fine grains in the tactite.

DEVELOPMENT

This consists of shallow surface cuts and trenches in the tactite. Numerous samples assayed show the WO₃ content to range between .01% and 0.64%. Traces of bismuth were noted.

See U. S. G. S. report and U. S. B. M. report.
