Item 2

GEOLOGY

Open cut 100' deep - walls nearly vertical - mineralization occurs in fractured limestone - assay wall in limestone on East - shale contact on West. Ore shows some iron oxide - numerous calcite stringers - bottomed by flat-dipping fault - .04 cut off

Cross-section of deposit

Grade is higher just above fault - some local faulting in ore body - later $2\frac{1}{2}$ to 1 str. ratio.
