Item 15

Drag Ore - IRON HAT DIST.

The Drag Ore claim is near the crest of the Tobin Range at the head of Lee Canyon, 25 miles southwest of Valmy, in T. 31 N., R. 40 E., Sonoma Range quadrangle. The property is 3 miles by steep trail from the nearest road. Coarse crystals of scheelite occur in calcite stringers that cut shaly limestone. A zone one foot wide and 60 feet long was mined to a depth of 10 feet by G. G. Pear, the owner, in 1942. Seven tons of sorted ore containing 90 units of WO_3 , and 0.77 tons of jig concentrate containing 21 units, were sold to Metals Reserve Co.
