

2600 0005

PROPERTY NAME: Unnamed Prospect
OTHER NAMES: Sample site 2945
MINERAL COMMODITY(IES): Pb, Ag, Pyrite and Arsenopyrite
TYPE OF DEPOSIT: Exposed mineralized vein in a prospect
and quartz veins
ACCESSIBILITY: Fair roads to the west of the main road
from Jungo.
OWNERSHIP: Unknown but recently staked and dozed
PRODUCTION: None
HISTORY: New with the last three years

County: Pershing
Mining District: Unnamed JUNGGO AREA
AMS Sheet: LOVELOCK
Quad Sheet: Jungo 7 1/2
Sec. 24, T 36N, R 31E
Coordinate (UTM):
North 4,538,080 m
East 0,377,420 m
Zone

DEVELOPMENT: Dozer-cuts

ACTIVITY AT TIME OF EXAMINATION: None

GEOLOGY: Workings explore several veins in shale member of the Triassic sediment.
One vein is in a shear with massive metal exposed along with minor qtz.
The massive metal was sampled 2945 and included Pb, pyrite, arsenopyrite
and possible silver. The second vein was a white bull quartz with
galena and other sulfides
There are older prospects in the same area which also sample qtz veins
in the sediments.

Photo's 3 and 4

REMARKS: Not identified in the Humboldt County Bull. 59
