Goldfield, Nevada,
September 11, 1922.

Tonopah Mining Company,
Tonopah, Nevada.

Gentlemen;--

Enclosed please find brief report of "The Blue Dick" Mine, which speaks for itself. I am the sole owner of this property and if it should prove interesting to your corporation, you may rest assured I am an easy man with whom to deal.

There is no hurry whatsoever in this matter, as I have been eight years in dressing this property for market, which in itself suggests patience.

I would be glad to meet you on any common ground for further interview.

Trusting I may be honored with a reply, I am,

Yours truly,

"THE BLUE DICK" MINE

"The Blue Dick" is a familiar name to old timers of Nevada mining fame, discovery was originally made on this property about 1880, by a man who styled himself "Blue Dick", and together with his associates followed an outcropping on the apex of the mountain, which is the beginning of a Dyke some two miles in length and with rich surface showing thruout. These operators confined their explorations to the one location or claim known as "The Blue Dick", by sinking a shaft 135 feet in depth, afterward driving a tunnel about the same distance, and connecting with shaft at bottom, together with quite extensive drifting, they took out some \$375,000.00 in high grade ore and packed same to Austin a distance of approximately 80 miles; owing to inadequate transportation and other encumbrances this property became lapse and was subsequently re-located by present owners. "The Blue Dick", or, as the present records show this group to be named "President Wilson" and numbered 1 to 6 respectively, with three additional claims added and known as "Junetta", "Daisy" and "Wild Rose", yet for more ready reference we chose to call this entire group "The Blue Dick".

The locations of each of the "Blue Dick" group were made in parallel with the Dyke thereon, same being a strong showing in mineral of Gold and Silver, Silver predominating, in all surface showing, the character of ores seems to run in Oxidized and Lime Porphyry, with a rich quality of White Quartz and this Dyke has been opened and proven in its entire length by shafts, cuts and tunnels on each claim.

There are now mined and broken, or ready formilling, approximately 1000 tons that will average \$30.00 per ton; also a safe estimate of 100,000 tons at \$12.50 to \$15.00 rock in sight, and several by-grade stringers all leading to larger ore bodies, no trouble to select from any of these claims specimens running \$500.00 per ton.

Each claim is nicely supplied with a growth of timber sufficient for stulls, etc. Water in abundance, three separate and distinct springs of "Aqua Pura", -- one especially running 25,000 gallons daily, and with little development will double this capacity. This spring is located on a natural camp and mill site, on a good auto truck road to main high-way.

This property is situated in Esmeralda County, State of Nevada, in the Lida Mining District, 2½ miles Southwest of Lida, and about 32 miles Southwest of Goldfield, nearest railroad transportation about 18 miles, M. & G. R. R.

Price - \$75,000.00

If Corporation is formed with view of immediate operation, will take stock in portion of payment.

Present owners are new and have been for past ten years continuously living on this property, during which time development work has been going on unceasingly. This property has never been offered for market before, but is now ready for classification as a real mine.

Principal and Attorney-in-fact.
