Examined August 1942

Sample No.	%Sb	Au oz/ton	Ag oz/ton	width vein
33	0.01	0.005	0.15	3'
34	0.06	0.005	0.05	3.9'

History and production Not known

Type Deposit (Geology) Vein, one to four feet wide, occurs in quartzite and is cut off by cross fault which is parallel to diorite dike.

Mine Workings An adit about 120 feet long explored the vein at some depth and a shaft, which is now caved about 30 feet below the surface, also prospected the vein. Several test pits on the vein were noted.
