NOTES ON THE MOTH GROUP AT STRATFORD.

This group consists of seven (7) claims and two fractions, situated in the Lodi Mining District, Nye County, Nevada, five miles northwest of the Lodi Tank, and about 100 miles from Tonopah. It is reached by team or auto from Tonopah by way of Cloverdale and Ione, or by rail from Tonopah to Mina, and thence by team.

It is the property presented by Mr. Victor Barndt.

The country rock of the district is andesite, showing no movement or alteration to any great extent. The veins are quartz, iron stained, narrow, and somewhat spotted, as shown by assays Nos. 1 and 2.

The development work consists of location work, and a few trenches which show the vein, with a well defined wall.

The veins run east and west, and are standing nearly vertical.

The claims are located in an unnamed low range of hills west of the Lodi Tank.

The assays were as follows:

#1 Moth No. 2 near dyke at top of hill 2' wide west side of cut.

Value \$9.60

#2 Moth No. 2 near dyke at top of hill 2' wide east side of cut. No. 1 and No. 2 were only 5' apart.

Value \$76.80

#3 Moth No. 3 cut near gulch 12" wide in location work.

Value \$8.80

#4 Moth No. 3 streak showing copper stain and oxide ore. Evidently not in place.

Value \$9.20

#5 Moth No. 3 perpendicular shaft 2' back from hanging wall ore mixed.

Value \$14.40

This property was to be paid for on a basis of \$16,000.00,
\$1000.00 cash and balance on time payments.

The property is one with small veins and small values,
worthy of more development work, but not a property that you would
desire, I believe.

Respectfully submitted,

Alexander T. Johnson.

Tonopah, Nevada,
September 19, 1906.
