

2870 0025

PROPERTY NAME: Sample Site 1377

OTHER NAMES:

MINERAL COMMODITY(IES): Au, Ag, Cu,

TYPE OF DEPOSIT: Replacement?

ACCESSIBILITY: See map, road fair

OWNERSHIP: Unknown

PRODUCTION: None

HISTORY: Unknown

County: Esmeralda Item 33

Mining District: Lone Mountain

AMS Sheet: Goldfield

Quad Sheet: Paymaster Canyon 7.5'

Sec. 12, T 1N, R 40E

Coordinate (UTM):

North 4 2 0 1 4 5 0 m

East 0 4 6 2 0 8 0 m

Zone

DEVELOPMENT: Single, vertical shaft (exploratory?), peripheral surface cuts and trenches

ACTIVITY AT TIME OF EXAMINATION: None

GEOLOGY: Site is single shaft sunk in alluvium. No structure apparent and host rocks mapped as Cambrian Poleta Formation. Dump consists of brecciated silicious sediments, metamorphosed phyllites, tactite, shale, and cemented with quartz vein material. Gouge material gossany, heavily Fe-Mn stained, surfaces of rocks coated with malachite, cerrusite. Workings possibly exploring faulting at depth.

REMARKS: Sample Site 1377
