Dear Sir:

We are gathering information for a bulletin on the mineral resource of Nye County. We call it the Longstreet Mining Dist

We wish data on your claims in the Clifford District.

Number and Name of Claims. . . . .

Ownership is in what name or names and address . . . . .

Golden Lion Mining & Milling Corp, under lease to  
John N Richardson

Location by distance from a point on highways or railroads . . .

55 miles from Tonopah, East 30 miles on Highway 6

25 miles north from this point good dirt road

Township and section if known, Sec. . . T. . . R. . . . .

Amount and nature of development work, 2,550 feet  
1600 of which is in ore

Shipments made, date and to what mill or smelter. . . . .

Nature of ore occurrence, vein, or, Vein

Formation ore occurs in, Rhyolite with a porphyry wall

History of the property, (Give details on back of this page)

Any maps or reports if mailed in will be returned promptly, or  
pencil sketches of claims and workings will be appreciated. Use  
this sheet for reply if you wish.

Thanking you for your attention to this request,

Nevada State Bureau of Mines

LONGSTREET MINE

Nye County

Nevada

Title, Golden Lion Mining & Milling Co

Lessee, John N Richardson, 1714 Wood St, Alameda, Cal

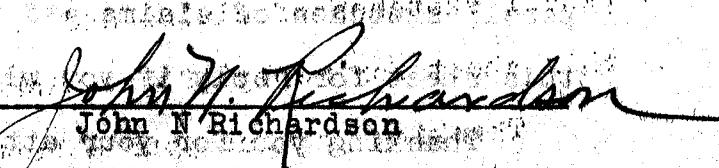

Property is located 55 miles east and north of Tonopah, Nevada. Consists of 11 claims, including water rights. Water sufficient for 500 ton mill and camp. Flows by gravity through 2 miles of pipe.

Property was originally opened by a shaft sunk at a point 300 feet below outcrop and hit the vein at 60 feet. Next a drift was run 600 feet in on the vein 400 feet below the bottom of the shaft. A raise from this point in ore to the bottom of the shaft. Later a cross cut was driven 300 feet below this point cutting the vein in the transition area between the oxidized and the sulphide zones. A raise has since been completed from this zone to the upper tunnel and we now have an opening clear to the bottom of the shaft. This raise is all in ore.

Several complete sampling jobs have been done on this property and in each case the average value of the ore ran above \$10.00, values coming chiefly from gold and silver. Average width of the vein is 4 feet and the various estimates as to probable ore run from 300,000 to 400,000 tons.

The writer believes that while there is considerable ore in sight that the property would have a much better outlook provided certain development work was completed, namely, to continue the lower cross-cut a distance of not to exceed 400 feet for the purpose of cutting a second vein which parallels the original vein and which vein appears to be the stronger of the two. The second project would be to sink in the sulphide area to determine what lies below the existing exposure. In the event the sulphide zone proved up another cross-cut could be driven at least 300 feet below the existing level. This would give us about 900 feet of backs. No work has been done on the property since 1932 and it is questionable whether the present price of gold would justify development at this time.

The writer also controls 5 additional claims to the west of this property known as the Mountain Lion West Extension #1, 2, 3, 4 and 5.

  
John N. Richardson

The workings are all in good condition and all points are readily accessible.
