

2980 0010

NAME OF PROPERTY

M-4 Defender Tungsten Group

C. W. and F. J. Fletcher, Mina, Nevada - owners

201

Item 10

LOCATION

In Marietta-Huntoon Mining District, Mineral County, Nevada, about 8 miles southwest of Marietta.

GEOLOGY

Scattered bodies of tactite along a contact between granite and hornfels. Scheelite occurs disseminated in fine grains in the tactite.

DEVELOPMENT

This consists of shallow surface cuts and trenches in the tactite. Numerous samples assayed show the  $WO_3$  content to range between .01% and 0.64%. Traces of bismuth were noted.

See U. S. G. S. report and U. S. B. M. report.
