

NAME OF PROPERTY

Defender Tungsten Group

G. W. and F. J. Fletcher, Mina, Nevada - owners

LOCATION

In Marietta-Hantoon Mining District, Mineral County, Nevada, about 8 miles southwest of Marietta.

GEOLOGY

Scattered bodies of tautite along a contact between granite and hornfels. Scheelite occurs disseminated in fine grains in the tautite.

DEVELOPMENT

This consists of shallow surface cuts and trenches in the tautite. Numerous samples assayed show the WO<sub>3</sub> content to range between .01% and 0.84%. Traces of bismuth were noted.

See U. S. G. S. report and U. S. B. M. report.
