BRIEF:

MINERAL HILL

EUREKA COUNTY, NEVADA

File: NK-11-11-32-C-001

Brief #1: Dated 4/1/82

PROPERTY: Siskon controls 9 patented claims (75 A), 7 unpatented claims (92 A) and 160 A of fee land at the Mineral Hill Mine, Eureka County, Nevada. SFP Minerals Corporation has a renewable 20 yr. lease with an option to purchase for \$500,000 during period August 1979-August 1984. SFP presently paying advance minimum royalty of \$2000/mo. which increases every year by 10%. Production royalty of 10% which reduces to 2 1/2% if purchase option exercised.

GEOLOGY: Thrust fault (Foberts Mtn. Thrust?) has moved and broken Devonian limestones/dolomites over Ordovician shales and slates of Vinini formation. Replacement/vein type mineralization, mainly silver, has been mined from breccia zones within the upper plate limestones/dolomites.

COMMENTS: A large volume of low-grade silver mineralization is possible. Evaluation of potential, if SFP lease dropped, would be by detailed mapping, surface sampling and shallow drilling.

*SFP dropped lease 1982
drilled 34 holes, geol. report feels that
untested target may still be present.*
