### A NEW BONANZA ?

HERE'S YOUR CHANCE TO INVEST IN WHAT MAY AGAIN DEVELOP INTO ONE OF THE RICHEST  
ELECTRUM-ORE MINES IN THE WORLD!

YOU MAY STRIKE IT RICH! For as little as 10¢ a share you can share in what may possibly develop into one of the most fabulous, bonanza, ELECTRUM-ORE discoveries in the entire world during modern times! Worth the risk? A good speculative investment? Decide this for yourself after reading this circular about the NATIONAL MINE in the State of Nevada.

NATIONAL MINE PROUCED BONANZA, ELECTRUM-ORE WORTH UP TO \$160,000 A TON!

When we first learned that "Bonanza" ore of this type and value had been produced by the NATIONAL MINE and that there might be a NEW BONANZA, ORE-BODY, we were just as skeptical as you probably are at this very moment. It is probable that you have never heard of ELECTRUM-ORE which is an alloy composed of about 50 per cent native gold and 50 per cent silver. As fantastic as it may seem, the NATIONAL MINE,--now the property of the WHELCHER MINES COMPANY, produced rich ELECTRUM-ORE in quantity--with values actually up to \$81.20 a pound, or at the rate of \$162,400 a ton.

ONE SHIPMENT OF RICH ELECTRUM-ORE FROM THE NATIONAL MINE NETTED \$365,000!

Waldemar Lindgren, one-time UNITED STATES GOVERNMENT GEOLOGIST, reported in the Department of the Interior's "United States Geological Survey Bulletin 601, Geology and Mineral Deposits of the National Mining Distrit, Nevada" as follows about some of the rich ore extracted from the NATIONAL MINE: "Mr. S. Taylor, who was superintendent of the mine in 1911, stated, at the trial before the United States Circuit Court at Carson in 1912, that on the 4½ Level, just north of Stall shaft, he extracted \$94,600 in electrum from a very small block of ground, \$70,000 of which was taken from a slab of ore a few inches thick measuring 3 by 6 feet. At the same trial Mr. George Stall testified that 1 ton of ore shipped by him yielded \$135,000. The present superintendent, Mr. P.G. Harrison, testified that one shipment of 4,500 pounds made in 1911 (probably the same lot of ore which the writer saw at the mine) netted \$81.20 a pound, or a total of \$365,000. One of the foremen testified that he had taken out as much as 1,085 pounds of "high grade" in a shift of 8 hours."

ONE OF WORLD'S RICHEST GOLD-SILVER SHIPMENTS FROM NATIONAL MINE!

There is substantial evidence to indicate that this shipment of 4,500 pounds of ore from the NATIONAL-MINE bringing net returns of \$365,000 was one of the richest gold-silver ore shipments, and possibly the richest for ore of its kind (Electrum) in the world. If this same lot of ore were shipped today at the present value of gold per ounce (\$35.00) it would be worth over \$600,000! Imagine, \$600,000 for only 2½ tons of Electrum-ore. We sure wouldn't need many tons like that to strike it rich would we?

WHELCHER MINES' SHARES YOURS FOR ONLY 10¢ EACH!

IS THERE A NEW "BONANZA ORE BODY" IN THE NATIONAL MINE---MAYBE WORTH MILLIONS?

The present plans of the Company are to reopen the main working tunnel of the property, and one of the upper levels. The driving of an entirely new tunnel to intersect the south part of the property is now under study and consideration.

The object of reopening the main tunnel is to get to the southern part of the property. (Refer to map in offering circular) which is thought to contain an entirely new "BONANZA SHOOT" of high grade "ELECTRUM-ORE", and where rich "Electrum-ore", averaging \$125 to the pound is said to have been found. In this southern section of the property there lies a large body of unexplored ground about 1900 feet from the portal of the main tunnel and about 600 feet south of the original "BONANZA ORE-SHOOT" of the NATIONAL MINE.

Since, due to the present inaccessible condition of the mine, we haven't any way of knowing or determining the correctness or completeness of the following statement of Mr. Noble, one of those who believes there to be an entirely new "BONANZA ORE-SHOOT" in the South part of the NATIONAL MINE, it is our plan to reopen the mine and find out whether we have a new body of high grade ELECTRUM-ORE by exploring this southern portion of the property.

MR. NOBLE SAYS THAT IT IS HIS OPINION THAT HIS DISCOVERY SHOULD PRODUCE "MILLIONS"!

Mr. Noble's statement (November 8, 1952) about his discovery in the NATIONAL MINE is as follows: "To Whom it may concern: In the years of 1937-38-39, I Edgar Noble and partners mined "HIGH-GRADE ORE from a NEW RAISE in the NATIONAL MINE, our high-grade ore went not less than \$125 per pound and some over \$200 per pound, one lot going \$204 per pound. (Note this would be at the rate of \$250,000 to \$408,000 to the ton!)

"There was no ground explored above, up to the surface a distance of 900 feet, surveyed by Mr. Frank O'Leary, County surveyor for Humboldt County, Nevada. The vein varied from 4 to 8 feet in width with "HIGH-GRADE ORE" scattered in nodule form throughout.

"There is absolutely no work done above, or to the south on this vein and we left "HIGH-GRADE ORE" when we left! The lease was about to run out and the owner would not renew a lease favorable to us. In the meantime the owner died and the property was transferred to new owners in New York.

IT'S MY PERSONAL OPINION THAT WE WERE ON THE EDGE OF AN ENTIRELY NEW BONANZA ORE SHOOT, AND MIGHT COMPARE WITH THE ORIGINAL SHOOT WHICH PRODUCED MILLIONS and was found by the Stall Brothers." Edgar B. Noble.

GEORGE R. STEVENS, ENGINEER AND GEOLOGIST CONFIRMS UNTESTED GROUND IN NATIONAL MINE

Stevens, in a letter dated September of 1953, states as follows about the NATIONAL MINE:

"A study of the maps, assay sheets etc. shows a large area in the southern part of the NATIONAL MINE ground that has not been thoroughly explored. This block is roughly 700 feet long and 600 feet deep along the vein which is from 2 to 5 feet thick. Exploring the South part of the NATIONAL MINE is a promising venture". George R. Stevens. (Note: Mr. Stevens was Engineer at the NATIONAL MINE for the Stall brothers when they were mining rich ore in "early days.")
