North 4 13 16 12 4 7 5 mHISTORY: See CribEast 0 16 11 13 11 0 0 mZone +11DEVELOPMENT: Blasted west facing outcrop of conglomerate siltstone.ACTIVITY AT TIME OF EXAMINATION: None.GEOLOGY: Outcrop of interbedded siltstone & conglomerate striking N35E, 15SE, (bedding).

Some of the siltstones have conglomeritic lenses & show graded bedding. The conglomerate has a tan colored matrix & contains sub-rounded clasts of siltstone, green chert (up to 1" across) & finely pebbly material. The matrix is silty & shows fine laminations.

In outcrop, the ratio of conglomerate to siltstone \approx 3/1. the rocks are brittle & break easily along fractures. A number of vertical fractures cut the outcrop.

REMARKS: Sample 939 - Siltstone & conglomeratePhoto.
