PRELIMINARY EXAMINATION REPORT

State: Nevada  County: Mineral  Mineral Products: Mercury

Name of property: Hitt Mercury Mine

Owner: Hitt Mercury Mines, Inc.  Address: Mina, Nevada

Lessee or Operator: Address:

Location: 2 lode claims located in Pilot Mountain or Sodaville Mining District, 11 miles east of Mina, Nevada.

History and production: Not known

Type Deposit (Geology): Cinnabar in the form of small, hard crystals occurs in evenly bedded strata of sandstone and conglomerate. The strata are cut by two faults at approximately right angles to each other, one striking N. 45 E. and the other N. 50 W. Cinnabar occurs on each side of the NE. fault. The better ore appears to be in the conglomerate along the west side of the fault. The NW fault has not been explored sufficiently to determine the extent of cinnabar occurring in it.

Mine Workings: The amount of development work done to date is almost negligible.
