Mercury--Nevada
Reward Mine,
Mina, Nevada.

(205)

ITEM 60

Words of AAG

This mine was examined by Messrs Evans and Strutzel on October 14, 1941. The property was misrepresented by the owners who claimed a reserve of 10,000 tons. Only one face of ore was seen and this assayed 8.8 pounds of Hg to the ton. Ore in the mill bin ran 0.5 pounds per ton. An expenditure for prospecting is not warranted.

This property had been recommended by Munsell and Gustafson for serious consideration. High grade ore was limited to fractures breaking across the main trend of very low grade ore in limestone.
