Mercury-Nevada  
Wholey Claims  
Poverty Peak .

137

ITEM 13

This property is located in the same district and adjoins the Turellis claims. The mineralization appears to be the northerly extension of the T. group. A tunnel has followed the ore for 70 feet. This has developed at one point a replacement in limestone for a true width of 4 feet. It is believed that the average will be better than 20 pounds across this width. Trenching on the surface has carried the mineralization another 100 feet, but the material appears to be erratic. Here again the price was \$100,000.
