

3740 0005

PROPERTY NAME: Big Jim Prospect  
OTHER NAMES: \_\_\_\_\_  
MINERAL COMMODITY(IES): Fluorspar  
TYPE OF DEPOSIT: Hydrothermal replacement  
ACCESSIBILITY: By foot from the east off a road from the south fork of Pne Cr.  
OWNERSHIP: \_\_\_\_\_  
PRODUCTION: Maybe but very small  
HISTORY: Located in 1934..See Papke 1979

(262)

County: Nye Item 19  
Mining District: Quinn Canyon  
AMS Sheet: Lund  
Quad Sheet: Quinn Cy 1:100,000  
Sec. SW 1/4 10, T 3N, R 56E  
Coordinate (UTM):  
North 4121214000m  
East 01611631000m  
Zone \_\_\_\_\_

DEVELOPMENT: A small adit with a shallow shaft at the end..mostly a prospect on a vein structure.

ACTIVITY AT TIME OF EXAMINATION: None

GEOLOGY: The ore-body is a pod of exposed fluorspar on the lower face of bold outcrop of jasperoid. The contacts of the ore are irregular and include fragments of jasperoid within the matrix of white-gray-purple fluorspar. The pod extends N-S along the face of the outcrop for about 35 feet and pinches out on both ends. Alteration includes small inclusions of quartz and fragments of jasperoid breccia. The out crop is very near a large quartz latite dike that trends northeast across the claim. Sample 1779 had .10ppm Au.
